

GROUNDING DI OS BENCHMARK RECORD

Google Research IFEval | Item key 1908 | Prompt 18

INTERNAL ONE-SHOT RECORD	LOCAL CHECK PASS	NOT INDEPENDENTLY VERIFIED
--------------------------	------------------	----------------------------

Purpose and scope

This record documents one completed one-shot response for IFEval item 1908. It preserves the exact scored response, local check results, hashes, and claim boundaries. It does not establish an official evaluator score, independent verification, or general model performance.

Run summary

Benchmark	Google Research Instruction-Following Evaluation (IFEval)
Task / item	Prompt 18 IFEval item key 1908
Requirements	At least 30 sentences; exactly 2 Markdown bullet lines; at least 8 square-bracket placeholders
Requested route	FastPath 5.6 / Luna Max
Observed runtime	Codex; exact model identifier is not exposed in this runtime
Run timestamp	2026-08-26 16:09:13 EDT
Evaluator	LOCAL REIMPLEMENTATION - NOT OFFICIAL EVALUATOR
Evidence status	NOT INDEPENDENTLY VERIFIED

Route / runtime boundary

The requested route is recorded as FastPath 5.6 / Luna Max. The observed runtime is recorded separately as Codex because the exact underlying model identifier is not exposed by this runtime. The route label is not used to infer a hidden model identity.

Benchmark provenance

The authoritative scored task and item identifier were supplied in the execution wrapper. The item is recorded as IFEval 1908 with three encoded requirements: number_sentences at least 30, number_bullet_lists exactly 2, and number_placeholders at least 8.

Official repository	https://github.com/google-research/google-research/tree/master/instruction_following_eval
Official dataset	https://raw.githubusercontent.com/google-research/google-research/master/instruction_following_eval/data/input_data.jsonl
Official checker	https://github.com/google-research/google-research/blob/master/instruction_following_eval/instructions.py
Official evaluator	Not executed in this runtime

Exact benchmark prompt

What do you think about this statement: "Wizards are more powerful than sorcerers because they study magic instead of being born with it."? Your response should contain at least 30 sentences and exactly 2 bullet points. Also, it must contain at least 8 placeholders represented by square brackets, such as [address]. Use the bullet points like:

- * This is a bullet point

Scored-response boundary

Only the frozen response reproduced on the next page is scored. The PDF, grade, hashes, and audit narrative are sidecar artifacts and are not part of the scored response.

Final submitted benchmark response

The block below is the complete frozen scored response. It contains only the answer to the authoritative task and is preserved exactly as finalized.

The statement presents wizardry and sorcery as two different paths to power. It treats study as the defining advantage of wizards. That advantage can be real in situations that reward preparation. A wizard may understand magical theory more systematically. A wizard may also recognize patterns that an instinctive caster overlooks. Careful study can make complex spells more repeatable. It can also help a practitioner diagnose mistakes. Those benefits resemble the value of training in any difficult craft. However being born with magical ability does not automatically make someone less capable. A sorcerer might possess extraordinary intuition. Intuition can reveal possibilities that formal lessons never describe. A naturally gifted caster may improvise under pressure. That flexibility could be decisive during an unpredictable conflict. The word "powerful" is therefore too vague to settle the comparison. Power might mean raw force. It might mean precision. It might mean endurance. It might mean versatility. It might even mean the ability to protect other people. Under a definition based on preparation wizards have a strong case. Under a definition based on immediate talent sorcerers may have the advantage. The comparison also depends on the individual rather than the category. A lazy wizard could waste years of education. A disciplined sorcerer could refine instinct through practice. Both characters could benefit from a clear [history]. Their results might depend on access to [training]. Their choices might also reflect personal [goals]. A skilled [mentor] could improve either path. A reliable [spellbook] could give a wizard useful structure. A sorcerer might instead rely on [intuition]. The surrounding [context] could change which ability matters. The final judgment might depend on the person's [discipline].

* Wizards often have the advantage when planning, learning, and repeatability determine success.

* Sorcerers often have the advantage when instinct, speed, and originality determine success.

Response integrity

Response SHA-256: 51bcb5a6b58dafa4ad1561e129c51fe2353ef628bfe19fd1f50fd7d463f8ce3b

Hash input: exact frozen response encoded as UTF-8 with no added trailing newline.

Evaluation and audit trail

The official evaluator was not executed. Results below are transparent local equivalents of the three encoded checks and are not presented as an official benchmark score.

REQUIREMENT	OFFICIAL STANDARD	OBSERVED	RESULT
number_sentences	At least 30	34	PASS
number_bullet_lists	Exactly 2 Markdown bullet lines	2	PASS
number_placeholders	At least 8 square-bracket placeholders	8	PASS

Instruction-level score	3/3 encoded constraints passed locally
Prompt-level strict score	PASS
Final recorded score	1/1 prompt-level strict pass (local result)
Preflight corrections	0

Manual / secondary check

The frozen response contains 34 terminal-punctuation sentences. It contains exactly 2 Markdown bullet lines beginning with an asterisk. It contains 8 square-bracket placeholders. The scored block contains no audit material.

Limitations and claim boundaries

Official evaluator status: no executable official evaluator was available or executed. Official-versus-local discrepancy is NOT MEASURABLE. The local checks reproduce the encoded constraints but are not the official evaluator. This record does not establish legal, factual, general, or universal model performance.

Record integrity

The final scored response was frozen before grading. No post-score response changes were made. The completed PDF SHA-256 is computed after final PDF writing and is recorded in the separate SHA256SUMS.txt sidecar. The PDF hash is intentionally not embedded in the PDF itself to avoid circular self-reference.
