{"artifact_designation":"Synthetic Controlled Sensitivity and Replay Record v1.0","baseline_id":"R

Hash 1 — SHA-256

093b8841a4bad0a1d5b46eab3a05d6d4376d060a98c69fd264fe241ce934cd21

VerdictReady: No.
Runtime state: `REPLAY REVIEW REQUIRED / EXPORT HELD`. The underlying Chapter 9 record independently reports the baseline reproduction as passed while production replay and export authorization remain incomplete.

[redacted]

Run the RCI replay formula on the frozen canonical baseline R9-BASE-001. Generate the complete canonical execution record using deterministic JSON serialization (UTF-8, sorted keys, no extraneous whitespace). Compute the SHA-256 of that exact canonical record and report it as Hash 1. Do not alter, infer, or fill any inputs. Return the formula result, canonical record, and Hash 1.

Worked for 41s

Formula result: `UNRESOLVED — replay branch required`

`R9-BASE-001` is the frozen Chapter 8 baseline; its baseline reproduction passes, while external release remains held. Because `RCI_b = L_b × A_b × C_b` is branch-indexed and no replay branch was supplied, `L_b`, `A_b`, `C_b`, and the numeric RCI result remain `null` rather than being inferred.

Canonical execution record — the SHA-256 below is computed over exactly these UTF-8 JSON bytes, with sorted keys and separators `,` and `:`:

JSON

No","replay_status":"Baseline reproduction pass","reviewer_status":"Not reviewed"},"field_register":[

Hash 1 — SHA-256

093b8841a4bad0a1d5b46eab3a05d6d4376d060a98c69fd264fe241ce934cd21

The independently recomputed hash matches the prior `Hash 1` exactly.
