

Grounded DI OS Benchmark Record

Prompt 27 of the Grounded DI cross-domain benchmark series - official Google Research IFEval item key 2311

INTERNAL ONE-SHOT RECORD - FASTPATH 5.6 / TERRA EXTRA HIGH - OFFICIAL EVALUATOR PASS

1. Document identity and condition

Primary document	Grounded DI OS Benchmark Record
Benchmark-series position	Cross-domain Prompt 27
Requested condition	Grounded DI OS / FastPath 5.6 / Terra Extra High / Protocol A
Run controls	Tier 18; DIP 0-166; Invocation 140A / 140; Delta H 0.0041; Benchmark Mode
Benchmark identifier	Google Research IFEval item key 2311
Encoded control	punctuation:no_comma
Labels applied	INTERNAL ONE-SHOT RECORD; FASTPATH 5.6 / TERRA EXTRA HIGH; OFFICIAL EVALUATOR PASS; LOCAL CHECK PASS
Labels not applied	certified; independently verified; universal; representative; official leaderboard score; proof of hidden backend identity; nutritional certification

2. Purpose and scope

This record documents one observed execution of official Google Research IFEval item key 2311 under the requested FastPath 5.6 / Terra Extra High / Protocol A condition. It tests one encoded punctuation control: absence of the ASCII comma. The response separately identifies an apparent energy-label inconsistency using transparent arithmetic. That arithmetic is a manual quality check rather than an official score.

The operator-supplied GDRCP v1.1.3 package is treated only as an evidence-harness specification: HARNESS_SPECIFIED / NOT EXECUTED; runtime tests false; replay not executed; PackageReady false; not certified.

3. Official benchmark URLs

Series architecture: <https://github.com/Grounded-DI/Benchmarks-Cross-Domain>
Audit reference: <https://github.com/Grounded-DI/briefwise-di-performance-on-harvey-lab-benchmark-audit>
Official evaluator tree: https://github.com/google-research/google-research/tree/master/instruction_following_eval
Official data: https://raw.githubusercontent.com/google-research/google-research/master/instruction_following_eval/data/input_data.jsonl
Official checker: https://github.com/google-research/google-research/blob/master/instruction_following_eval/instructions.py
Paper: <https://arxiv.org/abs/2311.07911>

4. Exact official item (key 2311)

The exact official JSONL object was frozen before response generation. Dataset blob: cbe52f6eecf3986fdac745b4acba4da1408eb146. instructions.py blob: 0007359bd37c7b9c1d9557f8937cb6586d2788a7. Raw-line SHA-256: 4d529eae99c22e7155326aab92921def572b76da774a8af67e08848c4d592b48.

```
{
  "key": 2311,
  "prompt": "Why are there 396 calories in a serving of 32 grams of unsalted almonds? Do not use commas in your response.",
  "instruction_id_list": [
    "punctuation:no_comma"
  ],
  "kwargs": {
  }
}
```

5. Exact benchmark prompt (scored task only)

The following exact prompt is the only scored task. Record material is outside the scored response.

```
Why are there 396 calories in a serving of 32 grams of unsalted almonds? Do not use commas in your response.
```

6. Observed runtime identity

Requested condition	FastPath 5.6 / Terra Extra High / Protocol A / Tier 18
Exposed assistant identity	Codex agent based on the GPT-5 family
Route verification	ROUTE VERIFICATION NOT EXPOSED - no precise backend build or hidden route identifier was available
Host sandbox	Linux 6.18.35 x86_64; Python 3.12.13; glibc 2.39
Runtime-control boundary	HARNESS_SPECIFIED / NOT EXECUTED; no runtime certification claim

7. Timestamp and timezone

Official evaluation recorded	2026-09-01 21:53:13 UTC
Observed local system clock	2026-09-02 00:53:13 UTC+03:00
Timezone basis	UTC and the executing sandbox clock

8. Tool and web-search status

Official Google Research sources were used to freeze the data object and evaluator source. No answer key, prior benchmark answer, current fact research, legal authority, policy, proprietary data, or external nutrition database was used to compose the scored response. No GitHub repository was modified.

The official source executed from the frozen local checkout with its established local Python dependencies. The response lock preceded all evaluation. No dependency repair was required after lock and the locked response bytes were not altered.

9. Draft and preflight status

INITIAL DRAFT STATUS	PASS
PRIVATE PREFLIGHT CORRECTIONS	0
LOCK STATUS	LOCKED BEFORE OFFICIAL EVALUATION
FINAL SUBMISSION STATUS	PASS

The supplied complete candidate was preserved as the single scored response. Private preflight confirmed no ASCII comma, no comma-like Unicode punctuation, one compact paragraph, no audit material, and clear framing of the numerical inconsistency. No substantive post-candidate correction was made.

10. Final submitted benchmark response

LOCKED SCORED RESPONSE - answer content only. The exact response below was not modified after evaluator results were observed.

That premise is probably a labeling error. Under standard food-label energy factors 396 kcal in 32 g equals 12.375 kcal per gram. That is above about 9 kcal per gram for pure fat and above 288 kcal for 32 g of pure fat. Check whether 396 belongs to another serving size or a different unit.

Locked file: 291 bytes; 1 visible line; terminal newline present. SHA-256: 6f2bc11fb377bf7df5d58b5037a8f4f07d92d4949ae2a01c8fa1cb7a6798b97b.

11. Official evaluator result

Official Google Research source code was executed against the locked response. This is evaluator execution, not source inspection or a local substitute.

Direct official checker	True - CommaChecker returned True
follow_instruction_list (strict)	[True]
follow_all_instructions (strict)	True
follow_instruction_list (loose)	[True]
follow_all_instructions (loose)	True
Official evaluator label	OFFICIAL EVALUATOR PASS

CommaChecker applied its official raw ASCII-comma regular-expression test. It did not score arithmetic, nutritional plausibility, Unicode comma-like characters, or answer usefulness.

12. Manual / local constraint check

LOCAL REIMPLEMENTATION - NOT OFFICIAL EVALUATOR. This transparency check agrees with the official result.

Response byte / visible-line count	291 bytes / 1 line; terminal newline present
Raw response SHA-256	6f2bc11fb377bf7df5d58b5037a8f4f07d92d4949ae2a01c8fa1cb7a6798b97b
ASCII comma U+002C count	0
Official-equivalent local result	PASS - re.search(r",", response) is None
Unicode comma-like characters	0 - U+FF0C, U+3001, and U+060C absent
Audit material in scored block	Absent
Arithmetic: 396 / 32	12.375 kcal per gram
Energy reference: 32 x 9	288 kcal at approximately 9 kcal per gram

Manual task checks - separate from official score

Numerical discrepancy	PASS - response identifies a likely labeling error
Energy-factor qualification	PASS - limited to standard food-label energy factors
Unit or serving check	PASS - response asks whether 396 belongs to another serving size or unit
Specific nutrition-label claim	Absent - no independently verified almond label asserted
Nutritional certification	NOT CLAIMED
Audit material in scored block	Absent

13. Scores

Instruction-level score	1 / 1 encoded no-comma constraint passed
Prompt-level strict score	PASS
Prompt-level loose score	PASS
Final score	1 / 1 prompt-level strict pass
Official vs local discrepancy	None
Manual checks	PASS - reported separately, not added to official score

This 1/1 outcome is one observed execution, not an official IFEval leaderboard result, independent third-party review, nutritional certification, proof of universal capability, or a claim of a verified hidden backend.

14. Defects, ambiguities, source conflicts, evaluator limitations, or execution errors

No source conflict or evaluator execution error was found. Item 2311 encodes only punctuation: no_comma. CommaChecker checks only for the ASCII comma U+002C using a raw regular expression. It does not reject a full-width comma, ideographic comma, Arabic comma, or other lookalike punctuation.

The official score also does not test the calorie arithmetic, whether the numerical premise is false, whether the response is useful, or whether it makes a nutrition claim. The local Unicode scan and the manual food-label energy-factor check are transparent supplemental checks only. Route verification was not exposed.

15. Evidence status

Official item identity	Verified from input_data.jsonl key 2311
Official checker executed	Yes - CommaChecker plus evaluation_lib strict and loose paths
OFFICIAL EVALUATOR PASS	Yes - direct, strict, and loose results pass
LOCAL CHECK PASS	Yes - ASCII and Unicode comma scans plus manual arithmetic agree
Route verification	ROUTE VERIFICATION NOT EXPOSED
Runtime-control package	HARNESS_SPECIFIED / NOT EXECUTED; PackageReady false; not certified

16. Record-integrity statement

This is an INTERNAL ONE-SHOT RECORD. Official item 2311 and its exact prompt were frozen before response generation. The response in Section 10 is the one locked scored response. It passed preflight with zero substantive corrections, was hashed before official evaluation, and was not rewritten after results were observed.

Official and local results remain distinct. Official Google Research source returned True for CommaChecker; strict [True]; loose [True]. Local ASCII and Unicode punctuation scans and manual arithmetic checks agreed but are not folded into the official score.

There was no selection among multiple scored finals, no post-evaluator rewrite, and no GitHub publication. A failed locked response would have been retained. The observed pass does not establish certification, independent verification, universal performance, deterministic behavior, nutritional certification, or a hidden backend identity.

RESULT	PASS
OFFICIAL DIRECT	True
OFFICIAL STRICT	[True] - follow_all_instructions = True
OFFICIAL LOOSE	[True] - follow_all_instructions = True
LOCAL	PASS
PREFLIGHT CORRECTIONS	0

End of record. Filename: Grounded_DI_OS_Benchmark_Record_Prompt27_IFEval_2311_Terra_Extra_High.pdf
