

Grounded DI OS Benchmark Record

Prompt 59 | Google Research IFEval key 2035 | FastPath 5.6 / Terra Extra High

Decision and execution status

LOCAL CHECK PASS - NOT OFFICIAL EVALUATOR. The official instruction_following_eval package is unavailable in this runtime and was not executed. The official NLTK English tokenizer asset used by the sentence utility was also unavailable. This record does not claim an official-evaluator pass or independent verification.

Field	Recorded value
Route	FastPath 5.6 / Terra Extra High; Protocol A; Tier 18; DIP 0-166; Delta H 0.0041.
Selection lock	Key 2035 was selected from pinned dataset metadata only - instruction IDs and arguments - before its prompt was read. It was unused in the 58 published positions.
Required controls	At least 2 Markdown-highlighted sections; whole-response double quotation; at least 5 sentences.
One-shot result	3 of 3 local checks passed; quote and highlight checks mirror pinned source behavior; local Punkt fallback counted 7 unambiguous sentences; 0 preflight corrections.

Pinned primary sources

Source	Pin / use
Google Research IFEval data	google-research/google-research, commit 932d4685e23f671b9e8c2abc72dd228ba5ff9252, instruction_following_eval/data/input_data.jsonl; key 2035.
Checker implementation	Same pinned commit, instructions.py and instructions_util.py. QuotationChecker and HighlightSectionChecker were mirrored; NumberOfSentences source contract was reviewed against a local Punkt fallback because the official NLTK English model resource was unavailable.

Record scope: this is a documented local check with an explicit unavailable-utility boundary. It is not an official IFEval execution or independently verified evidence.

Exact task and locked response

Prompt read only after the metadata selection was locked

Official IFEval prompt (verbatim)

Write a joke with at least 5 sentences. Use Markdown to italicize at least 2 sections in your answer, i.e. **italic text**. Wrap your answer in double quotes.

Locked one-shot response

"*A penguin waddled into a bakery and asked for a cake.* The baker said he had only pies. *The penguin replied that a pie would be fine if it came with a tiny tuxedo.* The baker blinked. The penguin explained that he was attending a formal fish dinner. The baker handed over a pie and asked for the punch line. The penguin said the punch line was that he had forgotten his wallet."

Human boundary review

PASS. The response is one coherent joke, keeps the whole scored response inside outer double quotation marks, contains two visible italic Markdown spans, and has seven simple declarative sentences. The response was locked before the local checks.

Sentence-count boundary

The pinned NumberOfSentences path calls instructions_util.count_sentences, which loads NLTK's English punkt model. That model asset was unavailable in this runtime. A task-scoped local PunktSentenceTokenizer fallback returned seven sentences; all terminal boundaries are ordinary periods and no abbreviation or ambiguous boundary is present. This is disclosed as a local check, not an official evaluator result.

Checker evidence and limits

Pinned-source logic where executable; explicit local fallback for sentence utility

Instruction	Pinned checker logic	Locked-response observation	Result
number_highlighted_sections = 2	Count nonempty *...* and **...** spans; pass when count >= 2.	Two nonempty italic spans: penguin bakery entrance; tuxedo reply.	PASS
quotation	Strip then require first and last characters to be double quotes.	First and final characters are outer double quotation marks.	PASS
number_sentences >= 5	Pinned utility loads NLTK English punkt and counts tokenized sentences.	Official asset unavailable; local Punkt fallback returned 7 unambiguous sentences.	LOCAL PASS

Verification limits and package manifest

Gate	State
Official evaluator	NOT EXECUTED. instruction_following_eval is not installed. Official-evaluator discrepancy: NOT MEASURABLE.
Sentence utility asset	OFFICIAL NLTK ENGLISH MODEL NOT AVAILABLE. Local Punkt fallback and manual unambiguous-boundary review recorded.
Independent verification	NOT INDEPENDENTLY VERIFIED.
Preflight corrections	0. No post-lock response edits were required.
Package contents	This PDF plus PDF.sha256.txt are enclosed in the matching Prompt59 ZIP package. ZIP and internal hashes are validated before publication.

Publication gate: publish only after standalone PDF text, ZIP structure, internal checksum, and GitHub commit contents are verified. The explicit utility-asset limitation is retained as part of the evidence boundary.
