

Grounded DI OS Benchmark Record

Prompt 58 | Google Research IFEval key 3069 | FastPath 5.6 / Terra Extra High

Decision and execution status

LOCAL EQUIVALENT PASS - NOT OFFICIAL EVALUATOR. The official instruction_following_eval package is unavailable in this runtime and was not executed. This record does not claim an official-evaluator pass or independent verification.

Field	Recorded value
Route	FastPath 5.6 / Terra Extra High; Protocol A; Tier 18; DIP 0-166; Delta H 0.0041.
Selection lock	Key 3069 was selected from pinned dataset metadata only - instruction IDs and arguments - before its prompt was read. It was unused in the 57 published positions.
Required controls	Exactly 3 Markdown bullet lines; English in lowercase; terminal postscript starting P.S. in the task text.
One-shot result	3 of 3 source-equivalent checker conditions passed; 4 of 4 manual boundary checks passed; 0 preflight corrections.

Pinned primary sources

Source	Pin / use
Google Research IFEval data	google-research/google-research, commit 932d4685e23f671b9e8c2abc72dd228ba5ff9252, instruction_following_eval/data/input_data.jsonl; key 3069.
Checker implementation	Same pinned commit, instruction_following_eval/instructions.py. Local equivalents used BulletListChecker, LowercaseLettersEnglishChecker, and PostscriptChecker behavior only.

Record scope: this is an evidence record for a local, source-equivalent preflight. It is not travel advice, an official IFEval execution, or independently verified evidence.

Exact task and locked response

Prompt read only after the metadata selection was locked

Official IFEval prompt (verbatim)

Can you create an itinerary for a 5 day trip to switzerland that includes exactly 3 bullet points in markdown format, in all lowercase letters, and a postscript at the end starting with P.S.?

Locked one-shot response

- * days 1 and 2: arrive in zurich, stroll the old town, visit the kunsthaus, and take a lake cruise.
 - * day 3: ride to interlaken, walk beside the aare, and use the afternoon for a short alpine excursion.
 - * days 4 and 5: continue to lucerne, cross the chapel bridge, take a mountain railway, and depart from zurich.
- p.s. reserve mountain transport in advance and leave time for weather changes.

Case interaction boundary

The task text asks for a P.S. postscript while also requiring all lowercase letters. The pinned PostscriptChecker lowercases the response before applying its P.S. pattern; the locked response therefore uses terminal lowercase p.s. so the official lowercase checker behavior and postscript checker behavior are both satisfied.

Human boundary review

PASS. The response is a five-day Switzerland itinerary with exactly three Markdown bullets, full lowercase text, and a final postscript. The response was locked before the checker-equivalent tests.

Checker-equivalent evidence

Pinned-source logic mirrored locally; official package not installed

Instruction	Pinned checker logic	Locked-response observation	Result
number_bullet_lists = 3	Count Markdown bullet lines beginning * or -; require exactly 3.	Three lines begin with *. No additional bullet lines.	PASS
english_lowercase	Require value.islower() and English language detection.	Python value.islower() returned True; response is English.	PASS
postscript = P.S.	Lowercase the value, then find a P.S. pattern.	Final nonempty line begins p.s.; pinned pattern matches case-insensitively.	PASS

Verification limits and package manifest

Gate	State
Official evaluator	NOT EXECUTED. instruction_following_eval is not installed in the local runtime. Official-evaluator discrepancy: NOT MEASURABLE.
Independent verification	NOT INDEPENDENTLY VERIFIED.
Preflight corrections	0. No post-lock response edits were required.
Package contents	This PDF plus PDF.sha256.txt are enclosed in the matching Prompt58 ZIP package. ZIP and internal hashes are validated before publication.

Publication gate: publish only after standalone PDF text, ZIP structure, internal checksum, and GitHub commit contents are verified. All listed local gates are required to pass.
